

Product Overview

The Aqua Control C4099N is a garden irrigation programmer, designed to facilitate the automation of the irrigation process in all types of taps. This device, presented in blue and black colors, with dimensions of 10 x 10 x 16 cm, allows users to set the frequency and duration of watering according to their needs, varying between every 1, 2, 3, 4, 5, 6, 8, 12, 24, 48, 72 hours or once a week and with durations of 1, 2, 3, 5, 10, 15, 20, 30, 60, 90 or 120 minutes. Its internal ball system for opening and closing the water ensures efficient management of the water resource.

Manufacturing Materials

The Aqua Control C4099N is made of high-quality materials that ensure its safety and durability. The main components include impact-resistant plastics and metals chosen for their resistance to corrosion. These materials ensure that the irrigation programmer is not only durable but also safe for long-term use.

Instructions for Use

To install and program the Aqua Control C4099N, follow these steps: 1. Connect the programmer to the desired tap. 2. Insert 2 AAA 1.5v alkaline batteries into the watertight compartment. Make sure to close the lid properly to avoid leakage. 3. Program the frequency and duration of watering using the configuration buttons. 4. If you need to delay the start of watering, use the 'delay' function, which allows a delay of between 1 and 12 hours. 5. For manual opening and closing, use the corresponding option on the device.

Keep the device away from children and ensure it is not directly exposed to water beyond its resistance capacity.

Maintenance and Care

To ensure long durability of the Aqua Control C4099N irrigation programmer, follow these tips: - Clean the exterior with a damp cloth to prevent the accumulation of dust and dirt. - Store the device in a dry place, protected from extreme weather conditions when not in use. - Regularly check the battery compartment to ensure there are no leaks or damage.

Safety Measures

- Make sure the batteries are placed correctly and the compartment is well sealed to prevent leakage.
- Do not expose the device to water pressures higher than 8 bar to avoid damage.
- Avoid prolonged exposure of the programmer to direct sunlight or extreme temperatures.

End-of-Life Disposal

Trademark: Aqua Control
When reaching the end of its useful life, the Aqua Control C4099N should be disposed of responsibly. Separate recyclable components and consult with local authorities about recycling options available for electronic devices and plastic components. Do not dispose of this product as common household waste.
